Introduction to get started, let's import libraries

```
In [1]: import pandas as pd
import numpy as np
import seaborn as sns
import re
import matplotlib.pyplot as plt
import requests
import os
import tweepy
from tweepy import OAuthHandler
import json
from pandas.io.json import json_normalize
from timeit import default_timer as timer
%matplotlib inline
```

Data Gathering

Data always comes from different sources. In this project, Data is collected from 3 different sources. The twitter archive is a good source of data but it does not contain complete information such as tweets count , or retweets count. We'll use tweepy to to get data from Twitter API.

First load the archive data using panda's read_csv method. Our data contains alot of rows to visually assess few (3) rows, take **transpose** using `.head(3).T`

```
In [2]: twitter_enhanced=pd.read_csv('twitter-archive-enhanced.csv') #read the csv file
```

```
In [3]: twitter_enhanced.head(3).T #transpose of first 3 rows
```

Out[3]:

pupper	None
puppo	None

We have other data set in the form of tab separated values of image prediction of each dogs for each tweet_id. We'll use request library to download the tab separated values of image prediction.

```
In [4]: url = 'https://d17h27t6h515a5.cloudfront.net/topher/2017/August/599fd2ad_image-predictions-20170828-140800.jpg'
file_name=url.split('/')[-1] # create the name of file using url
if not os.path.isfile(file_name): # check if the file name exist or not, if not then it
    response =requests.get(url) # store the response of url
    with open(file_name, mode='wb') as file: #open the file in writting mode
        file.write(response.content) # write the content of the response in file
```

As our downloaded or requested file is .tsv, We'll use same pandas .read_csv method but this time use sep='\\t' in the arguments to tell the pandas that it is tab separated file

```
In [5]: image_pred=pd.read_csv('image-predictions.tsv',sep='\\t')
image_pred.head(2).T
```

```
Out[5]:
```

To gather data from Twitter API, first we have to configure and set the environment for requesting the data from Twitter API

```
In [6]: #Setting up enviornment for tweepy
        CONSUMER_KEY = "<consumer key>"
        CONSUMER_SECRET = "<consumer secret>"
        OAUTH_TOKEN = "<application key>"
        OAUTH_TOKEN_SECRET = "<application secret>"

        auth = OAuthHandler(consumer_key, consumer_secret)
        auth.set_access_token(access_token, access_secret)

        api = tweepy.API(auth, wait_on_rate_limit=True) # wait_on_rate_limit to limit the request
```

```
In [7]: tweet_ids = twitter_enhanced.tweet_id.values # Select the tweet_ids from twitter_enhanced
        len(tweet_ids) # gives the number of tweets
```

Out[7]: 2356

```
In [8]: # Query Twitter's API for JSON data for each tweet ID in the Twitter archive
        count = 0
        fails_dict = {}
        start = timer()
        # Save each tweet's returned JSON as a new line in a .txt file
        with open('tweet_json.txt', 'w') as outfile:
            # This loop will likely take 20-30 minutes to run because of Twitter's rate limit
            for tweet_id in tweet_ids:
                count += 1
                print(str(count) + ": " + str(tweet_id))
                try:
                    tweet = api.get_status(tweet_id, tweet_mode='extended')
                    print("Success")
                    json.dump(tweet._json, outfile)
                    outfile.write('\n')
                except tweepy.TweepError as e:
                    print("Fail")
                    fails_dict[tweet_id] = e
                    pass
            end = timer()
            print(end - start)
            print(fails_dict)

Quality Issue

1. Some tweets do not contain an image
2. Timestamp is string and should be datetime
3. Tweet id should be string not integer
4. Dog stage and img_num are string they must be categorical
5. p1, p2, and p3 are inconsistent
6. Name column contains articles instead of names
7. Remove retweets
8. Some columns are extraneous and must be deleted

Tidiness Issue

1. Dog breed could be in one column instead of 4
2. All the dataframes could be fit into 1 master data

Data Cleaning Before starting the cleaning process create the copies of each dataframes

```

In [33]: clean_twitter_enhanced = twitter_enhanced.copy()
        clean_image_pred = image_pred.copy()
        clean_df_tweepy = df_tweepy.copy()

```

Tidiness Issue 1

Define In twitter_enhanced dog stage are in 4 different columns the must be in one column
Code

```
In [34]: clean_twitter_enhanced['stage']= ['doggo' if 'doggo' in i
                                             else 'pupper' if 'pupper' in i
                                             else 'floofer' if 'floofer' in i
                                             else 'floof' if 'floof' in i
                                             else 'puppo' if 'puppo' in i
                                             else np.nan for i in clean_twitter_enhanced['text']].st
clean_twitter_enhanced['stage'] = clean_twitter_enhanced['stage'].astype('category')
clean_twitter_enhanced.drop(['doggo', 'floofer', 'pupper', 'puppo'], axis=1, inplace=True)
```

Test

```
In [35]: clean_twitter_enhanced.sample(5).T
```

Name: name, dtype: int64

Quality Issue 7

Define Remove reweets from the data set using isnull method of pandas ##### Code

```
In [44]: clean_master_df = clean_master_df[pd.isnull(clean_master_df['retweeted_status_id'])]
        clean_master_df = clean_master_df[pd.isnull(clean_master_df['in_reply_to_status_id'])]
```

Test

```
In [45]: clean_master_df.info()

<class 'pandas.core.frame.DataFrame'>
Int64Index: 1964 entries, 0 to 2058
Data columns (total 27 columns):
```

```

tweet_id                1964 non-null object
in_reply_to_status_id    0 non-null float64
in_reply_to_user_id      0 non-null float64
timestamp                1964 non-null datetime64[ns]
source                  1964 non-null object
text                    1964 non-null object
retweeted_status_id      0 non-null float64
retweeted_status_user_id 0 non-null float64
retweeted_status_timestamp 0 non-null object
expanded_urls           1964 non-null object
rating_numerator         1964 non-null int64
rating_denominator       1964 non-null int64
name                    1866 non-null object
stage                   363 non-null category

retweet_count           1964 non-null int64
favorite_count          1964 non-null int64
dtypes: bool(3), category(2), datetime64[ns](1), float64(7), int64(4), object(10)
memory usage: 460.7+ KB

```

Quality Issue 8

Define remove extra columns from the master dataframe using panda's `.drop` method

```
In [46]: clean_master_df.drop(['in_reply_to_user_id', 'retweeted_status_id', 'retweeted_status_user_id',
                               'retweeted_status_timestamp', 'in_reply_to_status_id'], axis=1, inplace =True )
```

Test

```
In [47]: clean_master_df.info()

<class 'pandas.core.frame.DataFrame'>
Int64Index: 1964 entries, 0 to 2058
Data columns (total 22 columns):
tweet_id                1964 non-null object
timestamp                1964 non-null datetime64[ns]
source                  1964 non-null object

```

```

text                1964 non-null object
expanded_urls       1964 non-null object
rating_numerator    1964 non-null int64
rating_denominator  1964 non-null int64
name                1866 non-null object
stage               363 non-null category
jpg_url             1964 non-null object
img_num             1964 non-null category
p1                  1964 non-null object
p1_conf             1964 non-null float64
p1_dog              1964 non-null bool
p2                  1964 non-null object
p2_conf             1964 non-null float64
p2_dog              1964 non-null bool
p3                  1964 non-null object
p3_conf             1964 non-null float64
p3_dog              1964 non-null bool
retweet_count       1964 non-null int64
favorite_count      1964 non-null int64
dtypes: bool(3), category(2), datetime64[ns](1), float64(3), int64(4), object(9)
memory usage: 384.0+ KB

```

Storing and Acting on Wrangled Data

```

In [48]: clean_master_df.reset_index(inplace=True)
         clean_master_df.to_csv('twitter_master.csv', encoding = 'utf-8') #saved

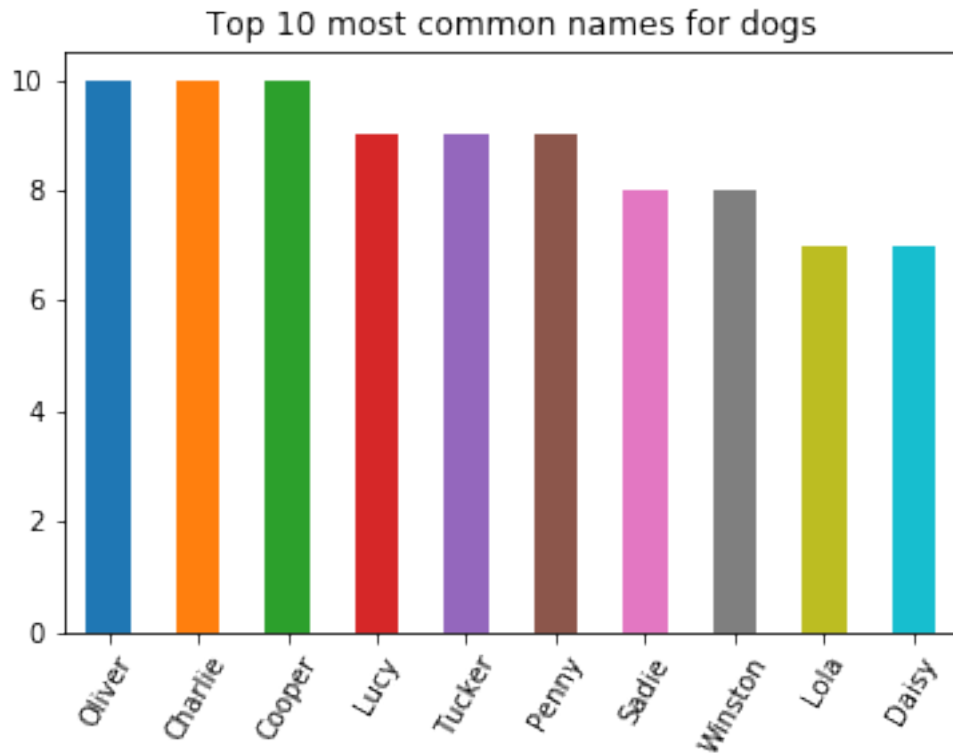

```

Top 10 most common names

```

In [49]: top_names = clean_master_df.name.value_counts().nlargest(11)[1:] #the first was none th
         top_names.plot(kind='bar')
         plt.xticks(rotation=60)
         plt.title('Top 10 most common names for dogs')
         plt.show()

```

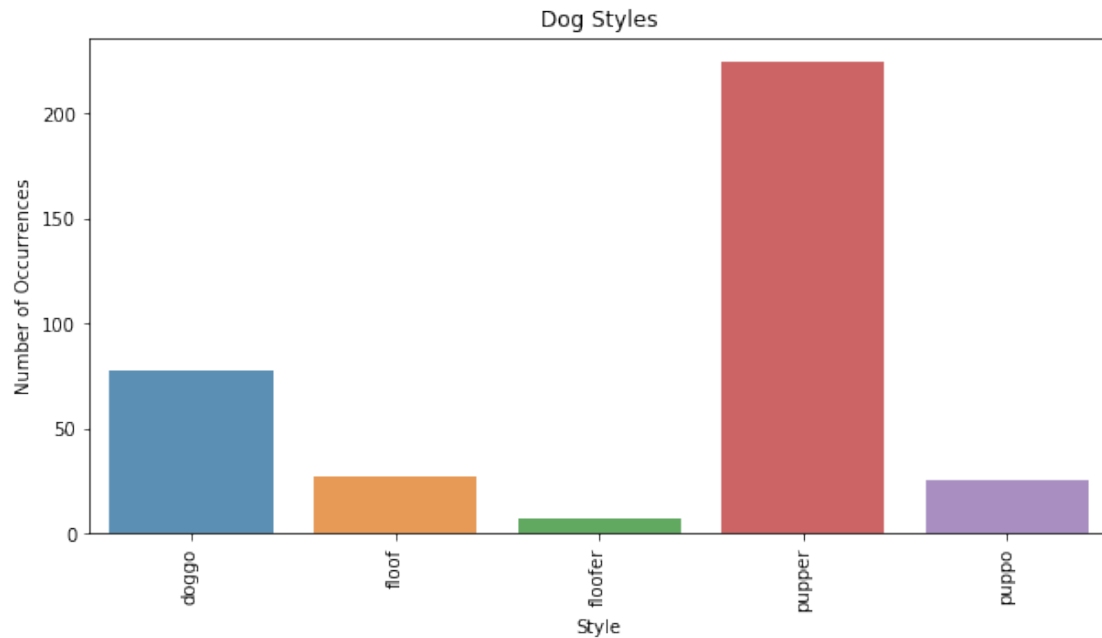

The most common name used are Charlie with more than 10 occurrence followed by Lucy, Cooper, Oliver having 10 occurrences

```
In [50]: clean_master_df.stage.value_counts()
```

```
Out[50]: pupper      225
         doggo       78
         floof       27
         puppo       26
         floofer       7
         Name: stage, dtype: int64
```

```
In [51]: stage_count = clean_master_df.stage.value_counts()
         f, ax = plt.subplots(figsize=(10, 5))
         sns.barplot(stage_count.index, stage_count.values, alpha=0.8).set(xlabel='Style', ylabel='Count')
         plt.xticks(rotation=90)
         plt.show()
```

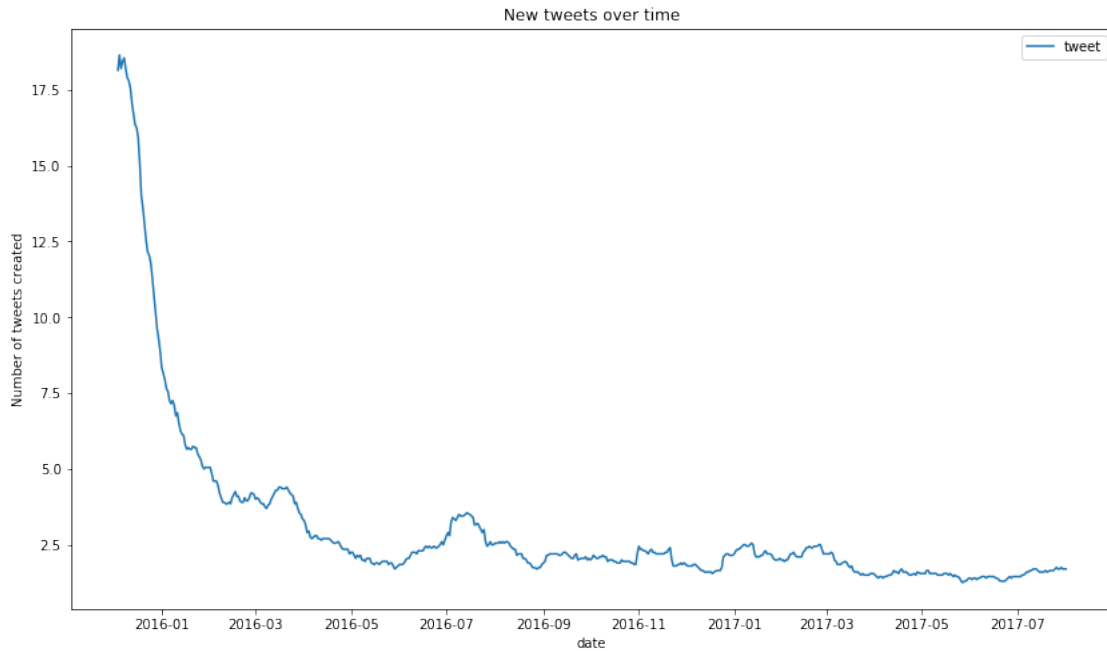

The most common style is pupper

```
In [52]: clean_master_df['date'] = clean_master_df['timestamp'].dt.date
         clean_master_df['tweet'] = 1

df1 = clean_master_df[['date', 'tweet']].groupby(['date']).sum() # alternatively .count

# Use moving averages to smooth the line
df1['tweet'] = df1['tweet'].rolling(window=20).mean()

# Plot
df1.plot(figsize=(14, 8), title='New tweets over time')
plt.ylabel('Number of tweets created')
plt.show()
```

The tweets daily frequency was initially at peak and drastically settle to average 2.5 tweets per day

```
In [53]: # Add retweets and favorites to the picture
df = clean_master_df[['date', 'retweet_count', 'favorite_count']]

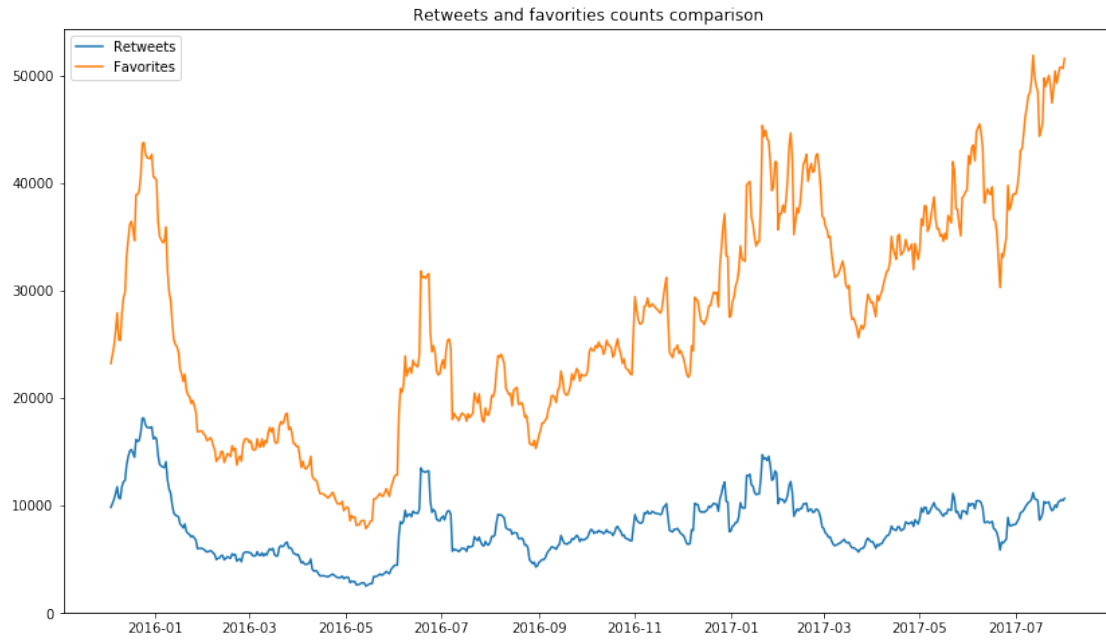

# Retweets
df2 = df[['date', 'retweet_count']].groupby(['date']).sum()
df2['retweet_count'] = df2['retweet_count'].rolling(window=20).mean()
# Favorites
df3 = df[['date', 'favorite_count']].groupby(['date']).sum()
df3['favorite_count'] = df3['favorite_count'].rolling(window=20).mean()

In [54]: fig, axs = plt.subplots(1, 1, sharex=True, sharey=False, figsize=(14,8))

axs.set_title('Retweets and favorities counts comparison')

axs.plot(df2, label='Retweets')
axs.plot(df3, label='Favorites')
axs.legend()

plt.show()
```

There is some relationship between retweets and favorite the more the favorite the more the retweets are
